

## Rotators

Valve rotators are used on diesel and gas engines in wide variety of applications. Each time a valve operates, the valve rotator turns the valve slightly.

### Ball & Spring

These work by using a series of spring-loaded ball and ramp assemblies. Again the effect is to rotate the supported Valve Spring.

### Garter Springs

These work by the action of the internal spring on the two main rings. The effect causes a small rotation of ring supporting the Valve Spring.
