

## Valve Rotator Applications

Increasing valve life by rotation

Where are Rotators used?

-

Diesel and Gas engines in the following applications:

-

Marine

-

Locomotives

-

Power generation

-

Trucks

-

Large off-road vehicles

-

Various specialised vehicles and engines

## Garter Spring Design

- Low cost, high volume applications

- High speed, low valve spring load applications

## Ball and Spring Designs

-

Higher valve spring loads

-

Larger engines 75mm to 640mm Bores

-

For higher contact stress applications

In these applications the rotators must have a long life span, extending to tens of thousands of hours. The quality and design of Helical rotators allow us to meet the demands of the toughest applications.
